ShareLah • Colours & Components Library

Good finds. Better shared. The visual system behind the ShareLah prototype: palette, type, components and how it follows Apple's iOS Human Interface Guidelines.

Colour Palette

⇒ Why we use this colour palette, and how it fits ShareLah's theme

> **A neighbourly marketplace, not a discount warehouse.** ShareLah helps neighbours split bulk buys ("2 for S$21") so nobody overbuys. The palette echoes the places these deals live: hawker-centre signage, kopitiam cups and brown paper grocery bags. Warm colours make swapping with a stranger feel friendly; calm neutrals keep money moments trustworthy.

Brand #C44212 is our single action colour: a deep, slightly red orange in the range of chilli-crab sauce and the painted signage at hawker stalls. Orange sits between the urgency of red and the optimism of yellow, which suits a limited-time deal without shouting like a clearance sale. It is also dark enough for white text to pass AA contrast (5.08:1), so primary buttons stay readable outdoors.

Ink #2B241D is a warm near-black with a brown undertone, closer to a cup of kopi-O than to pure black. It keeps 15:1 contrast for body text while feeling softer on a cream background.

Canvas #FFFCF8 and Paper #FFE9CE are off-whites rather than clinical white: Canvas is close to till-receipt paper, and Paper sits near the tan of a brown grocery bag. Paper marks "your split" moments: status cards, the split preview, deal photos.

60·30·10 as a guide. We aim for mostly canvas and white cards, a smaller share of warm neutrals (ink, muted, border) and only a little orange. Keeping orange rare means it points to the next thing to tap.

Supporting Colours

Used sparingly, only where meaning needs a second colour. Each is a different hue from brand orange so a warning is never mistaken for a call to action.

Aa	Aa	Aa	Aa	Aa
Savings	**Danger**	**Alert**	**Notice**	**Surround**
#E9F2E2 / #3F5A30	#B42318	#D92D20	#FFF2D6 / #8A5A00	#F6EFE6 / #2B241D
“Save 30%” pills, savings text	Destructive buttons	“!” badges for things to act on	Reported / pending states	Desktop backdrop · segmented track

Savings green ties directly to money kept: “Save 30%” pills and savings totals. Green means “good for you”, which reinforces the core benefit on every card.

Alert red #D92D20 is reserved for the “!” badge: something needs you (a join request, a portion ready to collect). A join request clears once you accept or decline it, and a “ready” alert clears when you open the split, so red never becomes wallpaper.

Danger red #B42318 marks irreversible actions (cancel a reservation, remove a neighbour), always behind a confirmation sheet.

Illustration: the sharing pizza

Portions are drawn as pizza slices: a bundle is a whole pizza and each shared item is a slice pulled away. Its warm crust tones echo the paper-bag palette.

Cheese	**Crust**
#FFDA83	#CC762B
Pepperoni	**Claimed slice**
#BB3C20	#F5BB65

Accessibility & Contrast

Pair	Foreground / background	Contrast	WCAG
Aa Ink on Canvas	#2B241D / #FFFCF8	**14.96:1**	AA ✓
Aa Muted on Canvas	#71665F / #FFFCF8	**5.45:1**	AA ✓
Aa White on Brand	#FFFFFF / #C44212	**5.08:1**	AA ✓
Aa Brand on Canvas	#C44212 / #FFFCF8	**4.97:1**	AA ✓
Aa Brand on Tint	#C44212 / #FFF0E5	**4.56:1**	AA ✓
Aa Pressed on Paper	#A9350A / #FFE9CE	**5.56:1**	AA ✓
Aa Savings green on its tint	#3F5A30 / #E9F2E2	**6.72:1**	AA ✓
Aa Error text on error tint	#972414 / #FFF0ED	**7.35:1**	AA ✓
Aa White on Danger	#FFFFFF / #B42318	**6.57:1**	AA ✓
Aa Muted · Increase Contrast on	#51463E / #FFFCF8	**8.94:1**	AA ✓

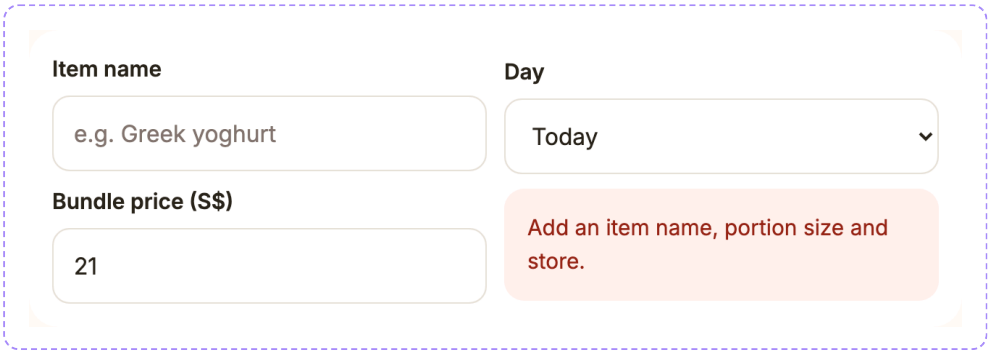

All pairs pass WCAG 2.2 AA for normal text (≥ 4.5:1). The last row is the darker muted colour switched in automatically when iOS *Increase Contrast* is on.

Typography

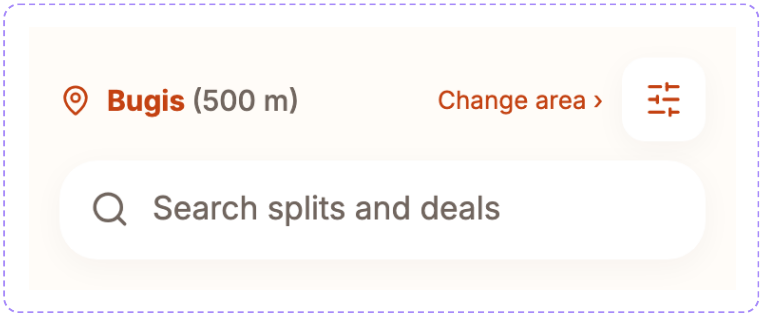

Style	Size	Used for	Sample
Display Bricolage Grotesque 800	28–32 pt	Prices, hero headings	**S$10.50 each**
Title Bricolage Grotesque 700	20–24 pt	Section & screen titles	**Portions & price**
Headline Inter 600	17 pt	Card titles, buttons	**Reserve a portion**
Body Inter 400	17 pt	Body text (iOS Body)	Meet Jerry at the Bugis+ entrance.
Subhead Inter 400/600	15 pt	Rows, chips, links	Bras Basah MRT · Exit A
Footnote Inter 400	13 pt	Hints, metadata	Each portion is one sealed item.
Caption Inter 500–600	11–12 pt	Tab labels, pills, eyebrows	READY FOR PICKUP

Bricolage Grotesque gives headings and prices a friendly, slightly hand-made character. **Inter** handles everything you read or tap; it is close to Apple's SF Pro in proportions and legibility, and the font stack falls back to the iPhone system font.

Inputs & Validation

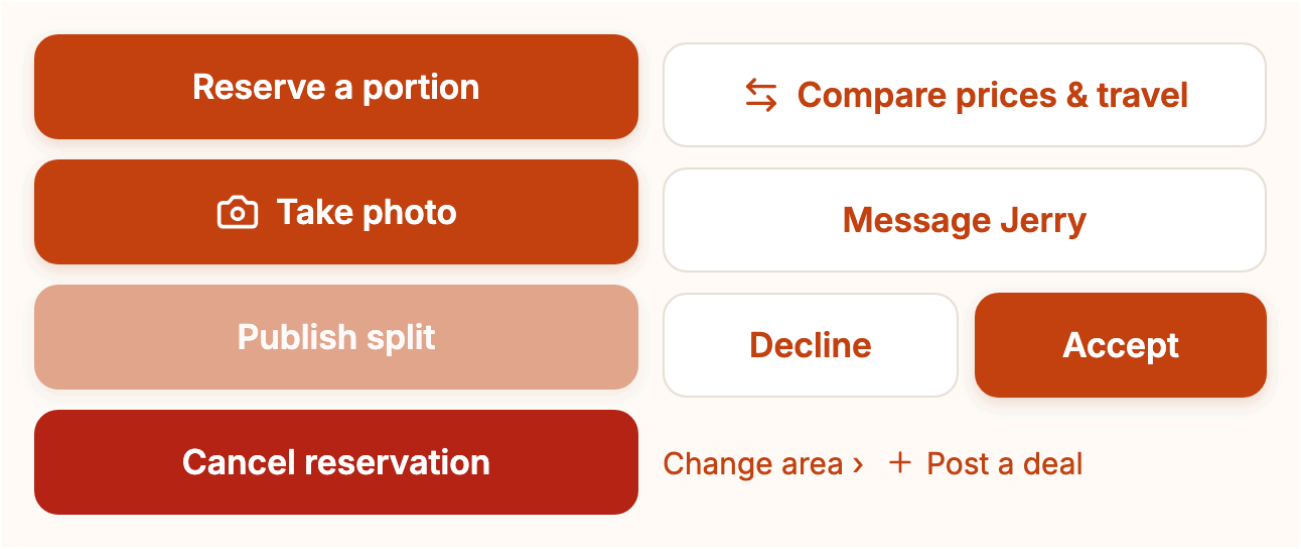

Location & Search

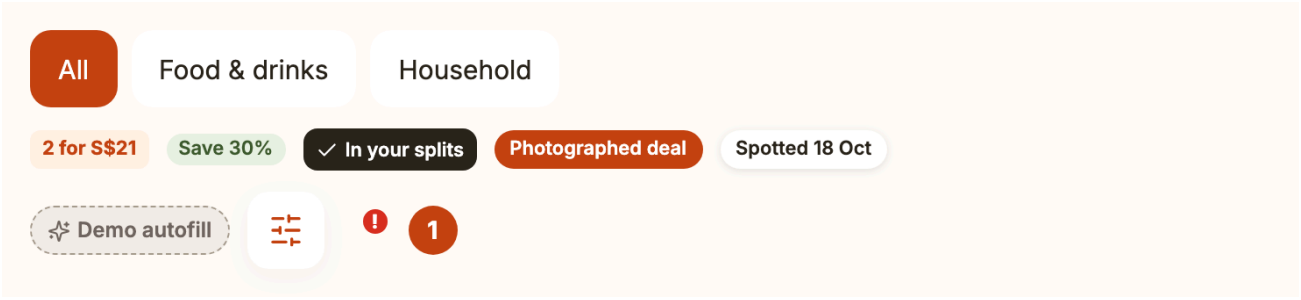

The area shows its search radius in brackets; the filter button sits beside it.

Buttons

Primary (one per screen, the next step) · primary with icon · disabled · danger (destructive, always confirmed) · secondary · paired decision · text buttons. All are ≥ 44 pt tall.

Chips, Tags & Badges

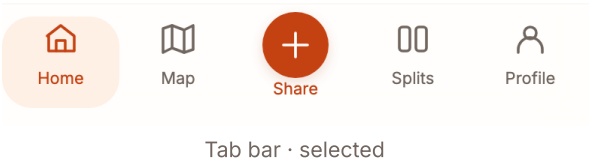

Category chips (selected / default) · offer tag · savings pill · membership pill · photo labels · demo autofill (dashed, deliberately outside the brand so testers know it isn't part of the product) · filter button · alert badge · section number.

Navigation

How we applied Apple's iOS Human Interface Guidelines

Reference: Apple Design Resources (developer.apple.com/design/resources) and the Human Interface Guidelines for iOS. ShareLah is a web prototype that runs in Safari on iPhone, so we followed iOS conventions wherever the web allows.

Guideline	How ShareLah implements it	Where
Layout & safe areas	Content respects the notch and Home indicator: the page opts into `viewport-fit=cover` and every edge element (header, tab bar, pinned action bars, sheets) pads with `env(safe-area-inset-*)`.	Headers, tab bar, action bars
Hit targets ≥ 44×44 pt	Primary/secondary buttons are 52 pt tall; chips, text buttons, segmented options, the filter button and zoom controls are at least 44 pt. Tab items are 52 pt.	Buttons, chips, tab bar
Tab bar for top-level navigation	Five persistent destinations (Home, Map, Share, Splits, Profile) with icon + label, a tinted pill for the selected tab, and a badge on Splits when something needs action. Redundant large titles were removed on tab roots because the tab bar already shows where you are.	Bottom navigation
Navigation bar & back button	Pushed screens show a back button labelled with the previous screen ("‹ Home", "‹ Pickup"), the screen title on the right and the item name as a subtitle, mirroring the iOS navigation bar.	Detail and flow screens
Sheets for focused tasks	Reserve, filters, area, rating and confirmations open as bottom sheets with 28 pt rounded top corners, a dimmed backdrop and a close button. They use a native modal dialog, so focus stays inside until dismissed.	Reserve, Filters, Area, Confirm
Segmented control	Splits uses a three-option segmented control (Joined · Hosting · Past) to switch between mutually exclusive views of the same list.	Splits tab
Typography	Body text is 17 pt, matching the iOS Body style, with a scale that follows Subhead 15, Footnote 13 and Caption 11–12. Inter stands in for SF Pro (which can't be freely embedded on the web); the font stack falls back to `-apple-system`. Bricolage Grotesque is reserved for display text to carry the brand.	All screens
Colour & contrast	Every text/background pair meets WCAG AA (4.5:1). Colour is never the only signal: alerts carry "!" and words, savings carry text. With iOS *Increase Contrast* on, muted text and borders darken automatically (`prefers-contrast: more`).	Palette, badges, savings

iOS Guidelines (continued)

Guideline	How ShareLah implements it	Where
Motion	Animations are short (200–320 ms, ease-out) and explain change: sheets slide up, the pizza assembles when a split is published. iOS *Reduce Motion* turns off movement (`prefers-reduced-motion`).	Sheets, pizza, AR tag
Clear feedback & states	Buttons show pressed and disabled states; validation errors appear inline next to the field and are announced; empty states explain why and offer a next step; notifications ("Jerry bought the bundle") clear once seen.	Forms, lists, badges
Undo & destructive actions	Checkout gives a 5-second window to undo before a hold is placed. Cancelling a reservation, closing a split, removing a neighbour and resetting data ask for confirmation in a sheet, with destructive actions in red.	Checkout, Hosting, Settings
Keyboard & input	Numeric fields open the right keyboard (`inputmode=decimal/numeric`); the pickup code uses `autocomplete=one-time-code` so iOS can suggest it; fields use ≥16 pt text so Safari doesn't zoom; the layout resizes for the keyboard.	Prices, pickup code
Privacy & permissions	The camera is only requested when you choose to photograph a tag or scan a code, with a sentence explaining why. If permission is denied there is always another way (choose a photo, enter the code).	Price-tag camera, QR scan
Accessibility (VoiceOver)	Icon-only buttons have labels ("Filters · 500 m radius, Nearest first"), hidden titles remain for screen readers, alerts use live regions and focus outlines are visible for keyboard users.	All screens
AR: keep UI minimal and in context	The simulated price-tag AR shows one small, translucent label anchored beside the detected tag, not over it, with a status line underneath. It never covers the camera controls.	Price-tag camera
Badges only for what matters	The red "!" appears only for things you need to act on (join requests, a portion ready to collect) and clears when you open the item.	Inbox, Splits tab

Known gaps and deliberate deviations

- **Dark Mode.** Not yet: the prototype declares a light appearance. All colours are tokens, so a dark set can be added without touching components.
- **Dynamic Type.** Sizes are fixed in points; browser zoom scales them, but they don't yet follow the iOS text-size setting.
- **Haptics.** Not available to web apps; confirmation relies on visual and VoiceOver feedback instead.
- **Share in the tab bar.** HIG reserves tab bars for navigation. Share is a central action that opens a sheet; we kept it because sharing a split is the app's core verb, and it never replaces the current tab.
